Videos guides

# Monitor

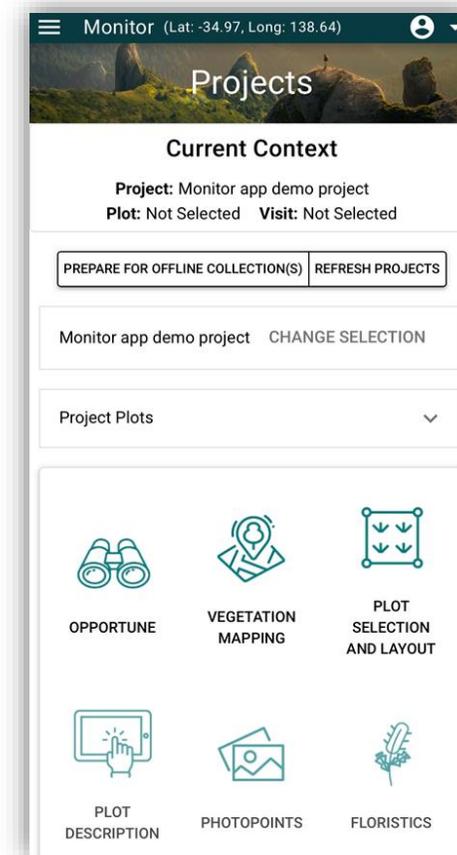

- + Field Data Collection App
  - + The EMSA Modules and Protocols outline standardised methodologies for surveying
  - + Monitor captures in-field data entry for those surveys.
- + Saves time on data entry
- + Restricts data to 'picklists' or 'data type' with certain restrictions
- + Standardises terminology
- + Staging and Production platforms

# Using the Monitor App

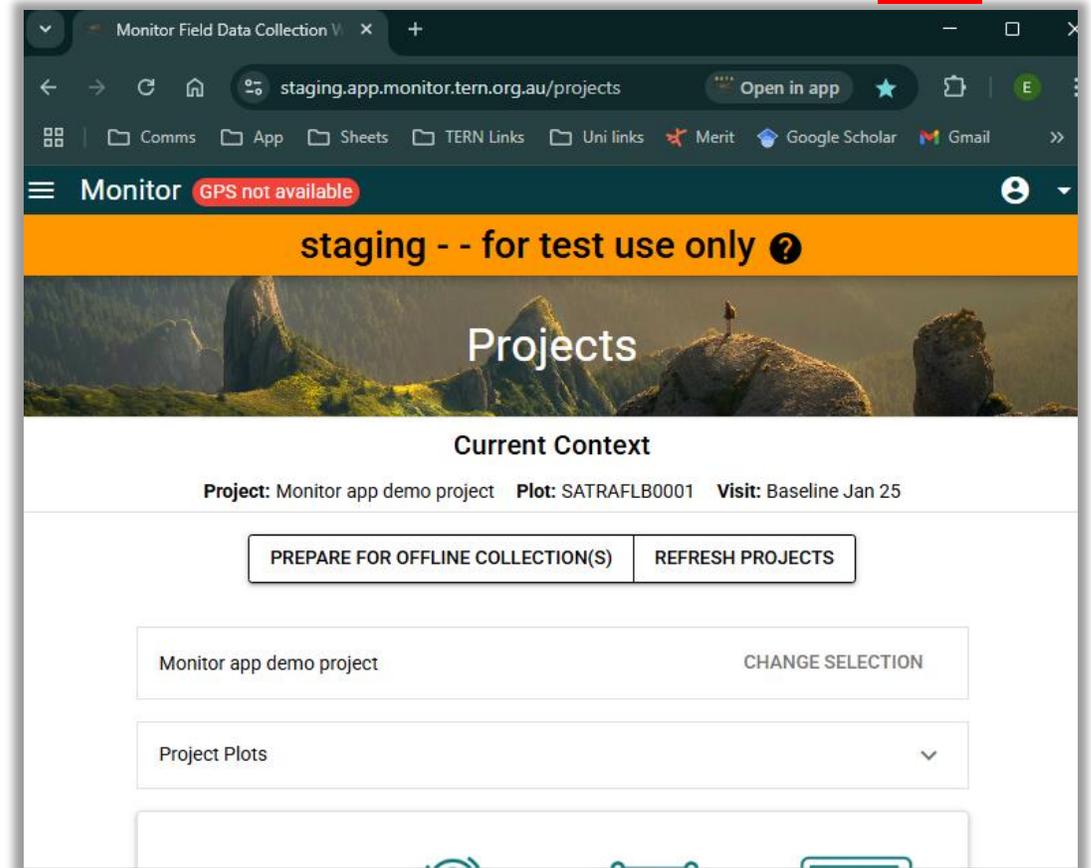

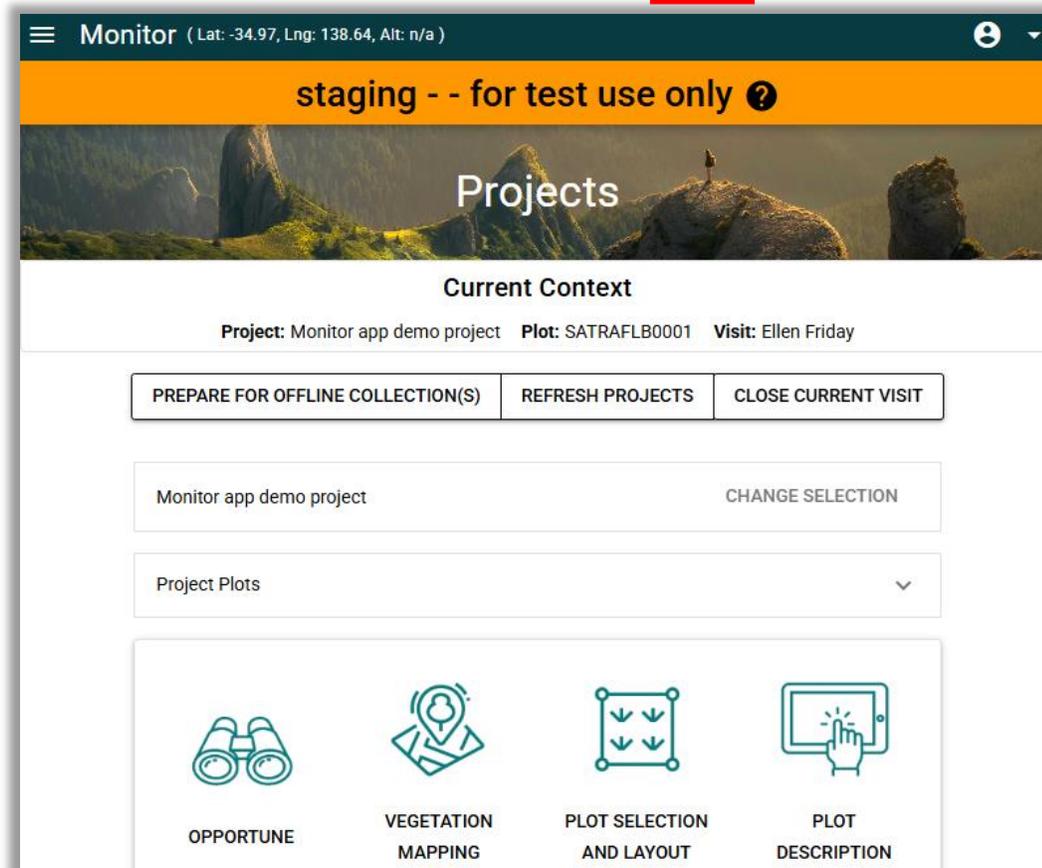

- + Progressive Web App (PWA)
- + Developed for use on **Android devices**
- + Optimised to be used with Chrome  please don't use Samsung Internet! Microsoft Edge)
- + Login using Atlas of Living Australia credentials
- + Admin and Field Data Collectors.
- + Staging platform vs Production platform

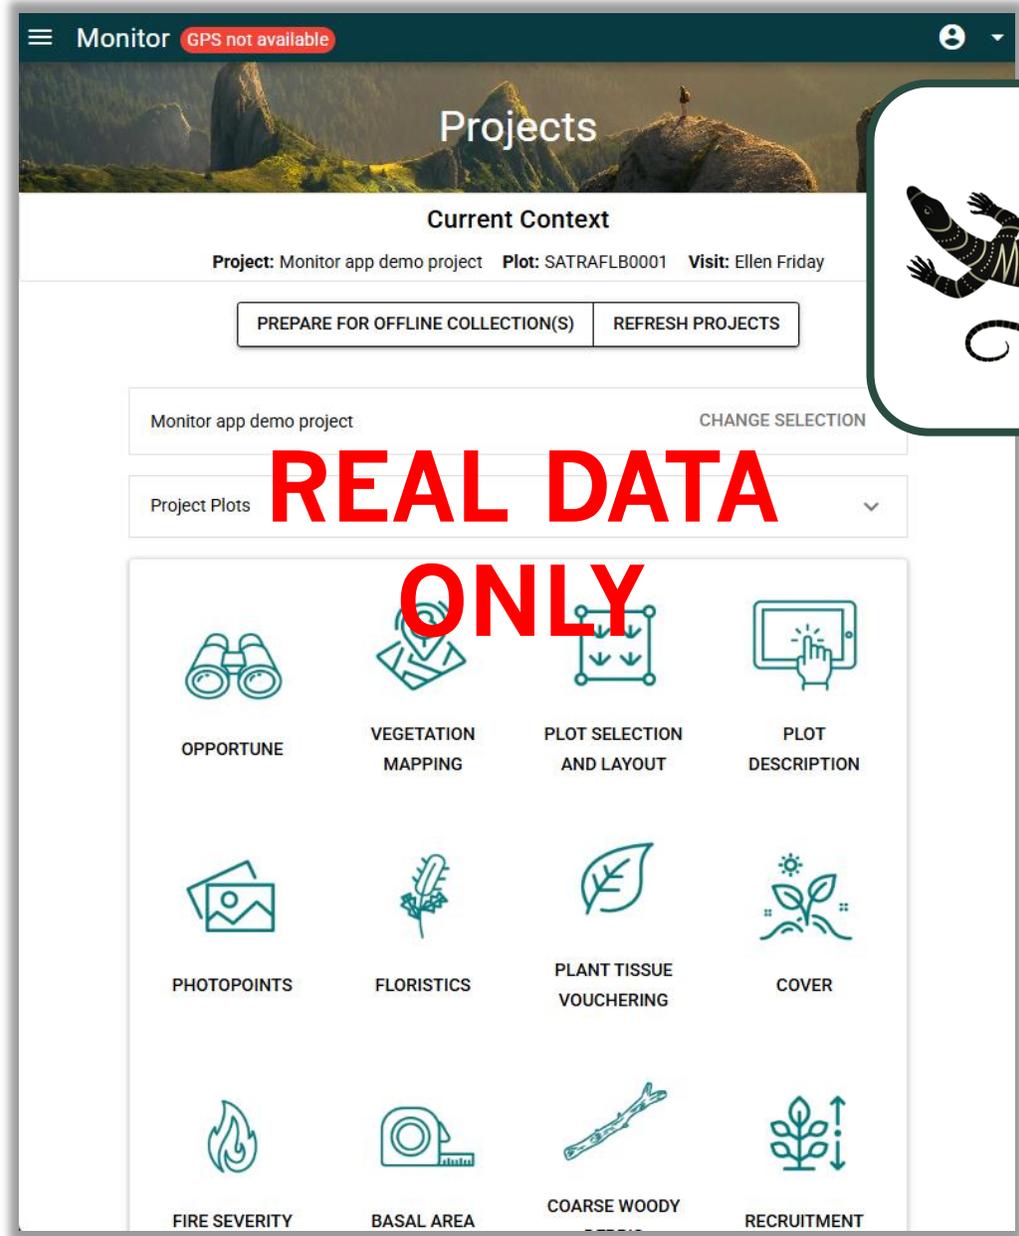

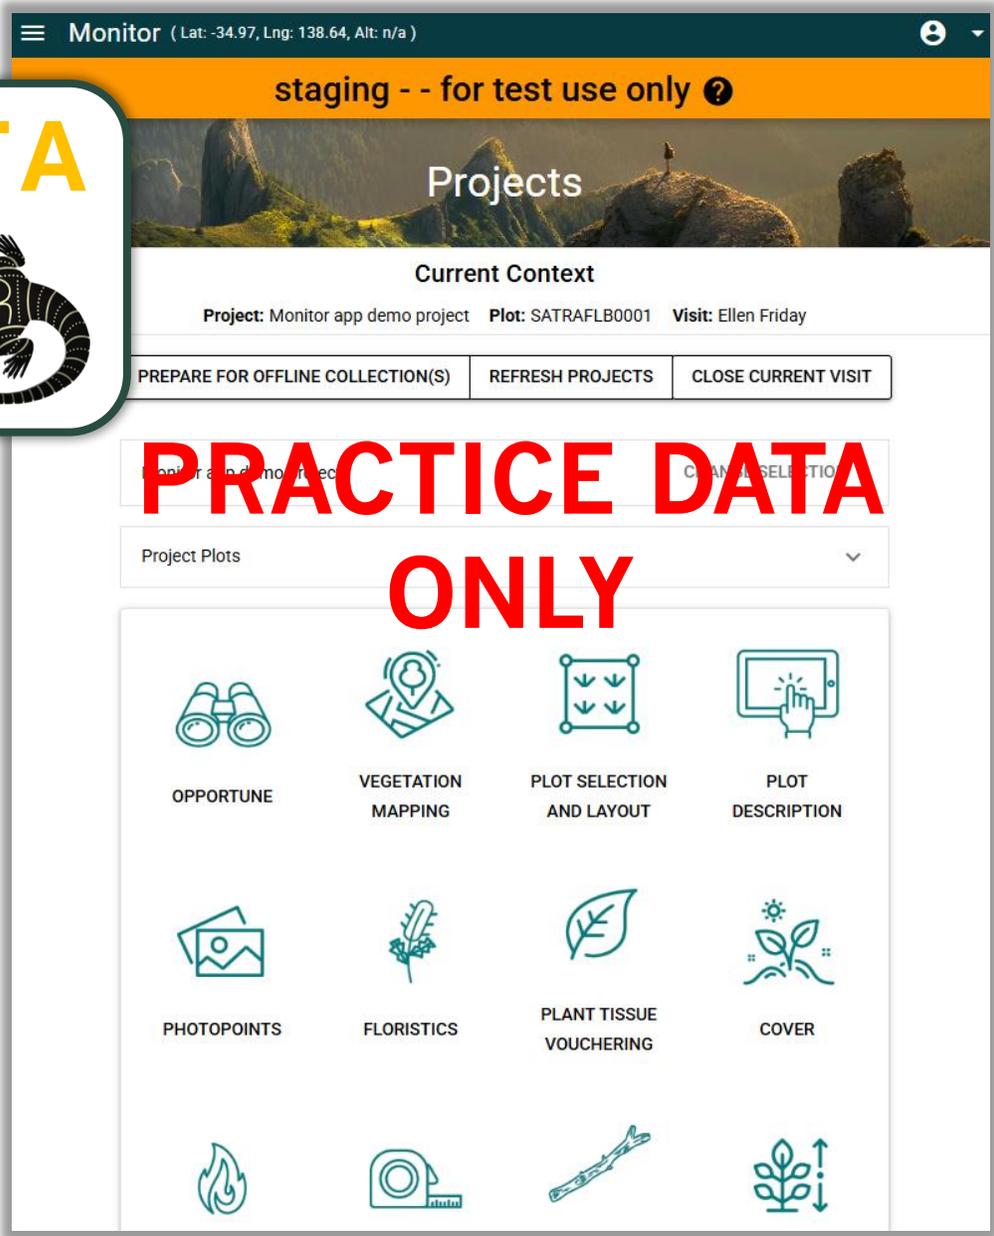

# Installing the Progressive Web App

PWA 

Internet Browser 

staging.app.monitor.tern.org.au

## Steps for installing the Monitor Staging PWA

- + Open [staging.app.monitor.tern.org.au](https://staging.app.monitor.tern.org.au) in the Chrome browser 
- + If prompted by a pop up to 'install' follow the link
- + Don't use the 'Open PWA' in the middle of the screen, it won't work.
- + Select the  icon in the top right of the browser
- + Select  to home screen or  install
- + If prompted, select "install" again 
- + Close the chrome browser
- + Open the Monitor app via the  icon
- + Log in using your ALA account details 

# EMSA modules and protocols

- + Modular so they can be tailored to specific project needs
- + Modules may have one or more protocol variations
  - + Standard vs Enhanced
  - + Multiple methodologies
  - + Plot vs off-plot modules
- + Module dependencies

Method of data collection

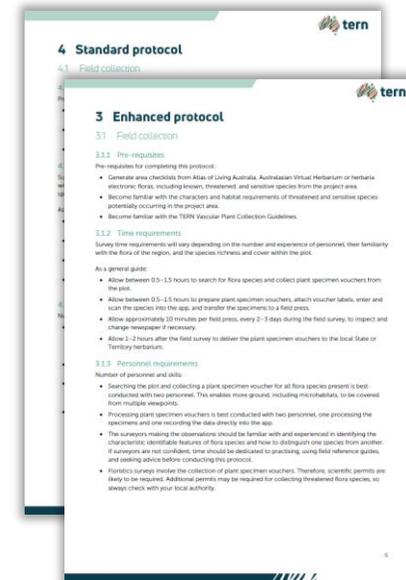

FLORISTICS

Module icon

Floristics		CLOSE
Protocol	Description	
Floristics - Enhanced	Collect plant specimen vouchers for all species present in a plot.	START
Floristics - Standard	Plant specimen vouchers collected for a subset of the species present in a plot and photo collected for the remaining species.	START

Protocol

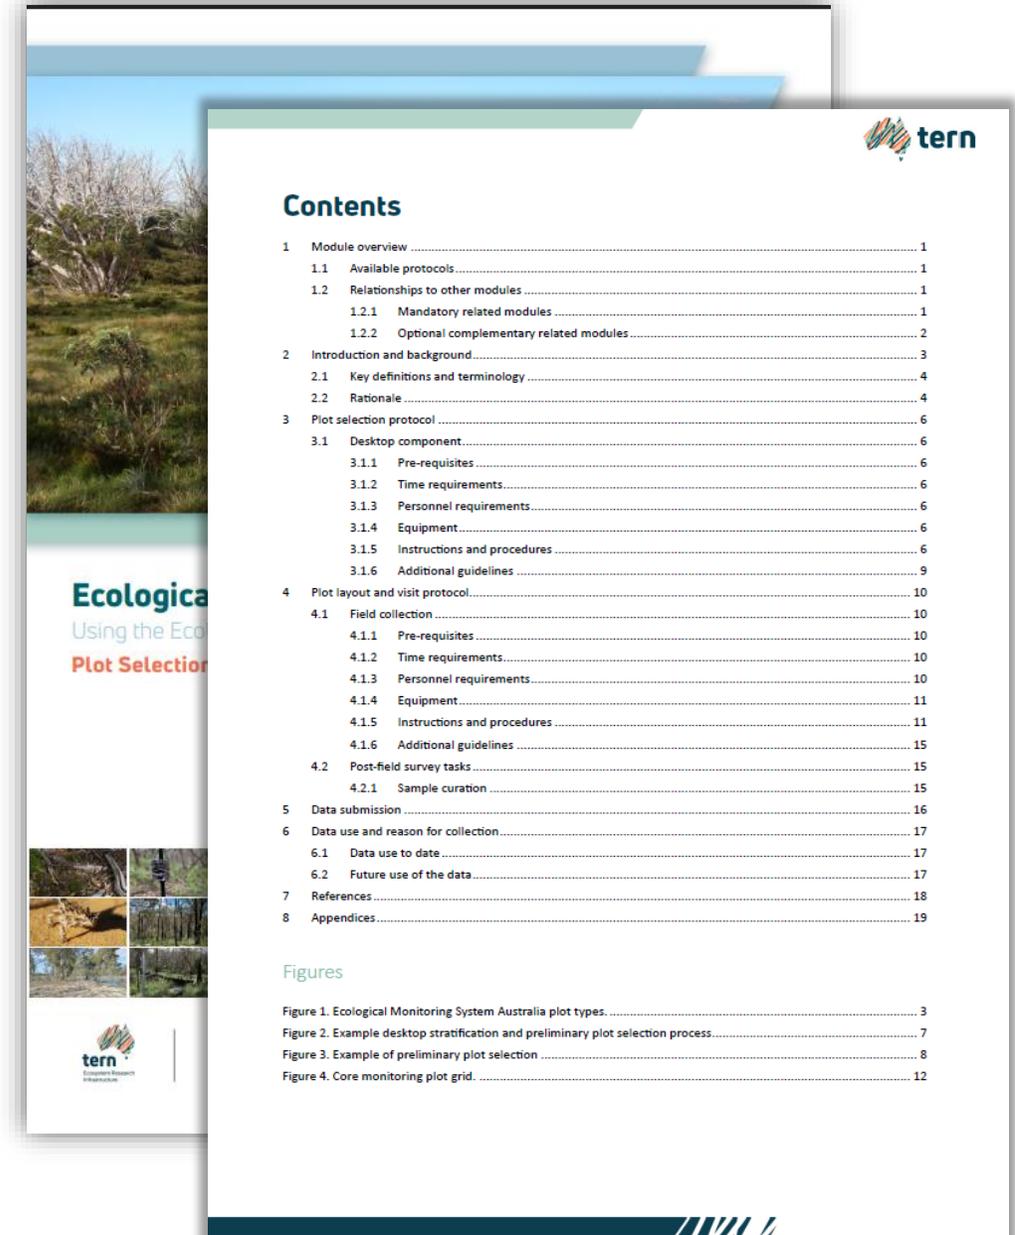

Manual sections

# Module manuals

- + Step by step instructions and procedures
- + Additional guidelines
- + Figures and diagrams
- + Detailed rationale for methodologies
- + Multiple protocols
- + Equipment list
- + Time requirements
- + Outlines relationships with other EMSA modules (dependencies)
- + Data use and reason for collection
- + [emsa.tern.org.au](http://emsa.tern.org.au)

# Plots

- Core Plot
- Fauna Plot
- Biodiversity Plot (2ha)
- Bird Survey area (2ha)

# Project design –plot locations

- + **Plot Type:** Impact, Control
- + **Replicate plot #**
- + **Before-After, Control-Impact (BACI) designs**
  - + **Control plots:** where no environmental interventions are taking place within a plot/ immediate surrounds. Control sites are also commonly referred to as reference sites.
  - + **Impact plots:** plots where environmental intervention activities are occurring, and impacts could be expected.
    - + e.g. either side of a fenced area where pest control activities are occurring
- + EMSA website FAQs

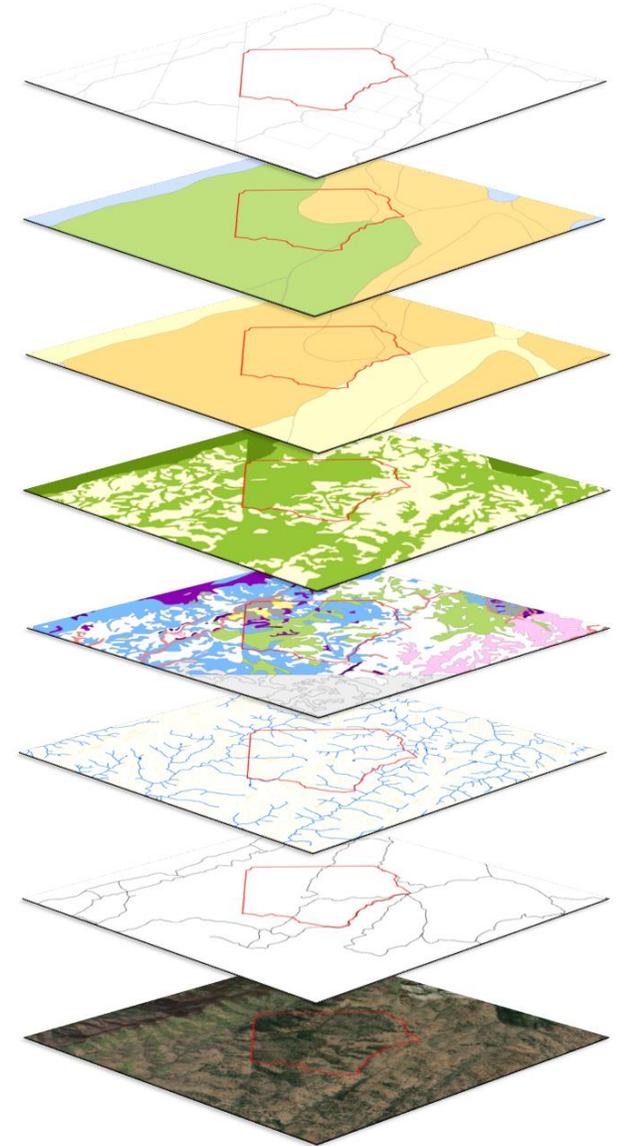

# Plot Selection and Layout Module

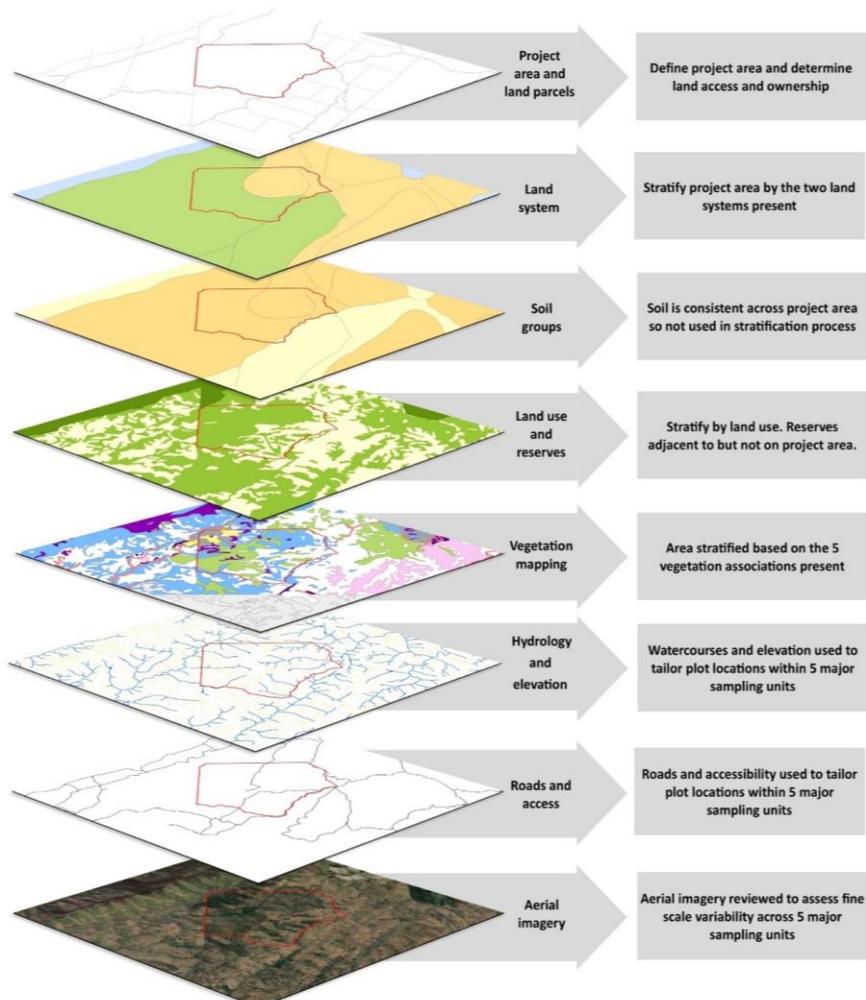

## Plot Selection Protocol

- + Desktop component
- + Undertaken by project managers
  - + Define project area boundaries
  - + Stratify the project area into sampling units
  - + Select proposed plot locations
- + All of the other modules require the Plot Selection module to be completed prior to fieldwork
  - + Non-plot based modules will only require the Project Area to be defined
  - + Plot-based modules will require recommended plot locations to be selected.

# Plot Selection and Layout Module

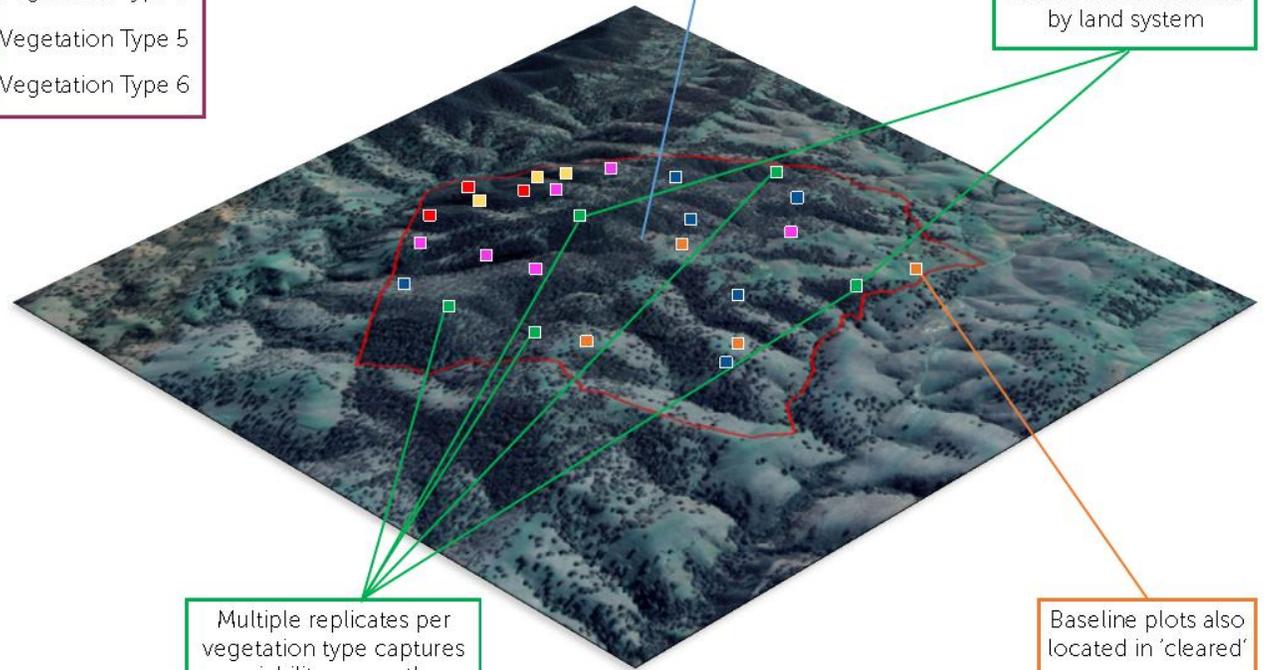

- Vegetation Type 1
- Vegetation Type 2
- Vegetation Type 3
- Vegetation Type 4
- Vegetation Type 5
- Vegetation Type 6

Vegetation type is the primary variable used to stratify the project area

Plots are located in accessible areas but away from tracks and watercourses

Plots are also stratified by land system

Multiple replicates per vegetation type captures variability across the project area

Baseline plots also located in 'cleared' areas

Example desktop stratification and preliminary plot selection process

# Plot Name: WAMSWA0001

Monitor GPS not available

staging - - for test use only ?

# Plot Selection and Layout Module

## Plot Layout and visit protocol

- + Ground truthing plot
- + Determining on ground suitability of plot locations
  - + Representative of the project area
  - + Homogenous vegetation community
  - + Accessible
- + Requires extremely precise location data (GNSS receiver)
  - + Ensure measurements monitor change

# Photopoints Module

- + 360° panoramas captured using one of three protocols
  - + DSLR Panorama
  - + Compact Camera Panorama
  - + Device Panorama
- + Visual reference recording environmental change over time
- + Data from DSLR Panoramas can be used to
  - + Create 3D point clouds
  - + Provide estimates of basal area and biomass

# Plot Description Module

+ Uses standardised terminology to describe physical characteristics of the plot including

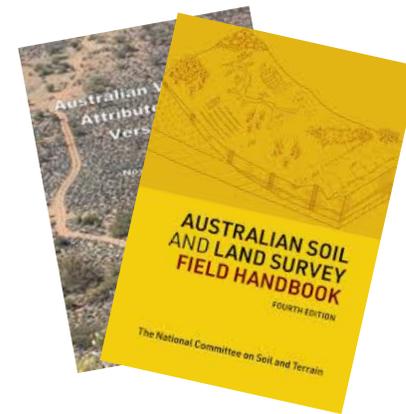

- + Landform
- + Land surface
- + Land use
- + Lithology
- + Fire history
- + Site disturbance
- + Structural formation
- + Growth stage

+ Terminology aligns with Australian standards

- + The National Vegetation Information System (NVIS)
- + Australian Soil and Land Field Survey Handbook (the Yellow Book).

+ Revisits capture change in vegetation

- + Physical disturbance like fire, flood, grazing etc.
- + Ecological change such as flowering, fruiting, die back, recruitment etc.

# EMSA Modules

## Vegetation Monitoring

Vegetation Mapping

Opportune

Basal Area

Recruitment

Plant Tissue Vouching

Condition Module

Floristics

Coarse Woody Debris

Cover

Fire Severity

# Floristics Module

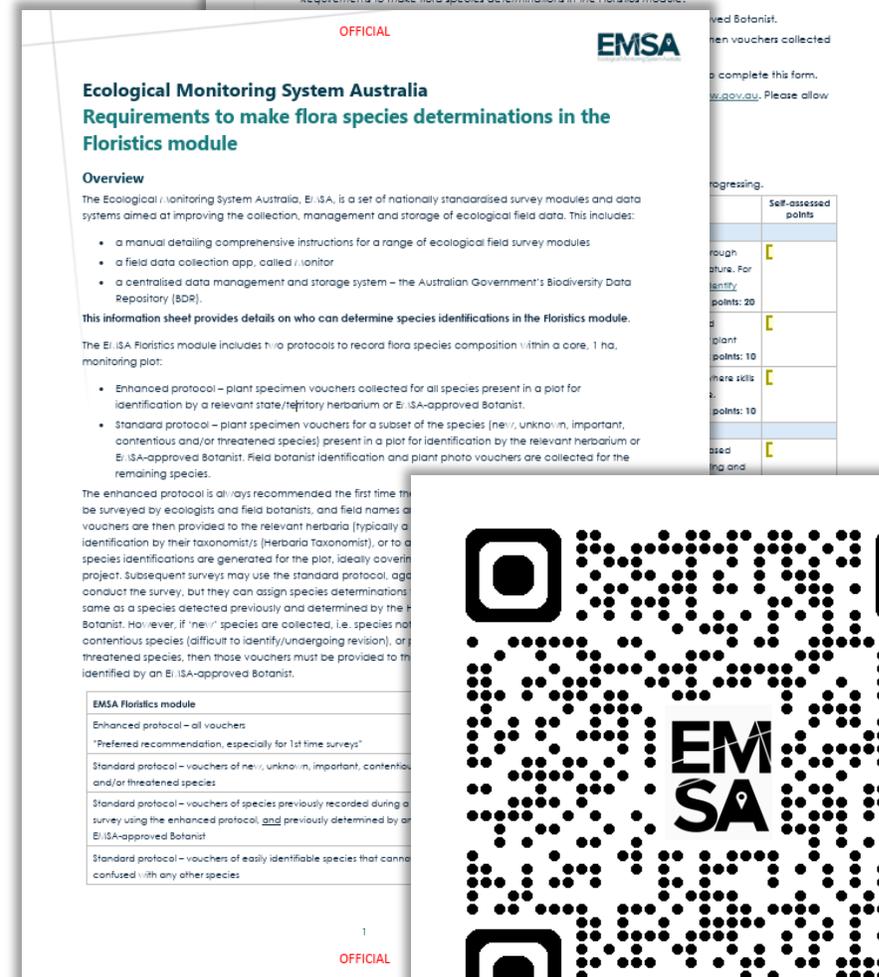

- + Collect voucher specimens for of all the species appearing on a plot
- + Collect specimens that:
  - + Representative of the population at the site,
  - + Include distinguishing ID features (flowers and seeds etc.)
  - + Are fertile (if possible)
  - + Have above and below ground structures (where possible)
- + Collect into a day press on the plot and then transfer into a field press when barcoding and naming.
- + Voucher specimens are pressed and dried.
  - + Photographs may be taken to accompany the pressed specimen (e.g. of bark, habit etc.)
- + On revisits only collect voucher specimens for new species
  - + Photograph species that have already been inventoried
- + Use field names to identify unknown species
  - + Field names carry over to other protocols such as Cover and Recruitment
- + Herbarium or approved botanist will verify the species for voucher specimens

# EMSA-approved Botanist

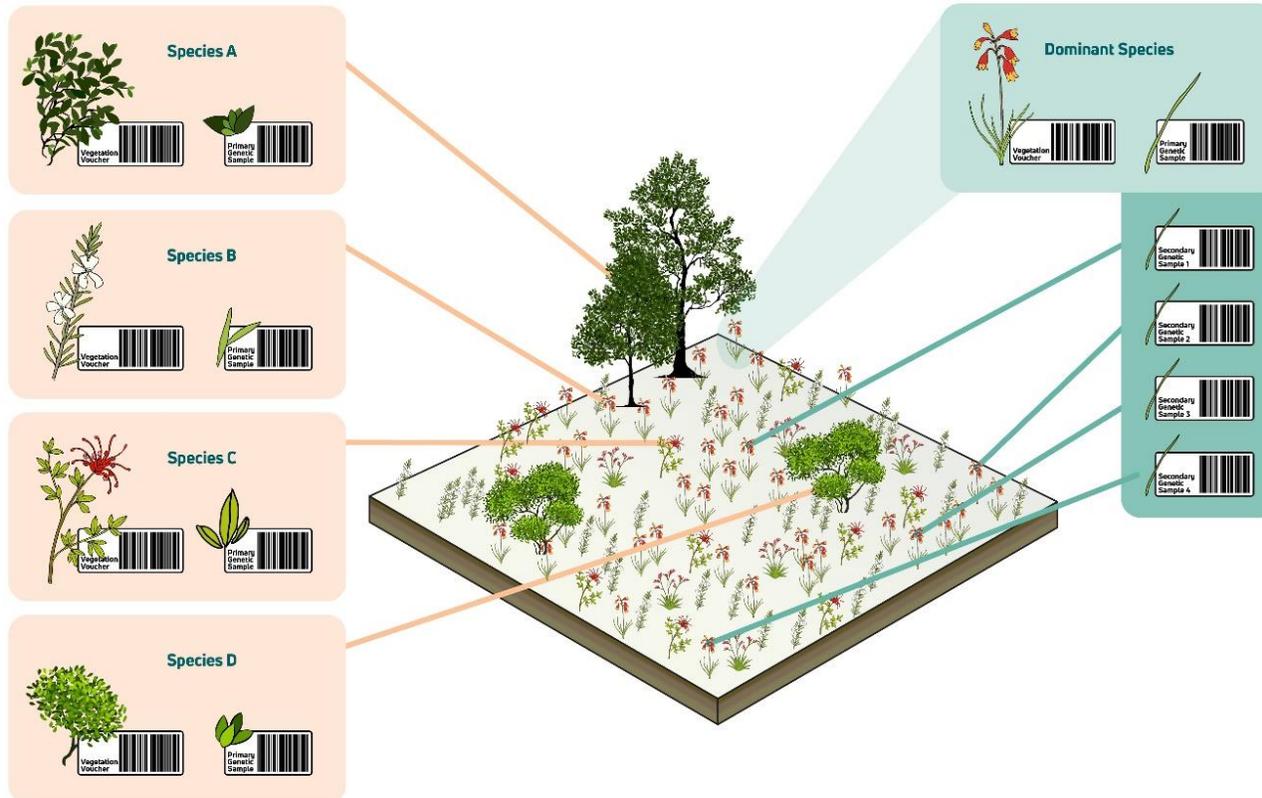

- + EMSA-approved botanists may make vouchered species ‘determinations’ in the place of herbarium-based botanist.
- + *Requirements to make flora species determinations in the Floristics Module (factsheet)*
  - + Outlines who can ‘determine’ species identifications in the Floristics module
  - + How to apply
- + *Application form to be recognised as an EMSA-approved Botanist*
  - + Self assessment
  - + References
- + Applications sent to [ltmp@dcceew.gov.au](mailto:ltmp@dcceew.gov.au)

# Plant Tissue Vouchering Module

- + Collect, dry and store plant tissue vouchers from within the plot
- + Replicate collections for dominant species from each stratum

## Plant tissue voucher uses:

- + Molecular analysis including:
  - + DNA Barcoding
  - + Population genetics
  - + Stable isotope
  - + Leaf trait analyses
- + Accurate plant species ID
- + Identify genetically important populations.

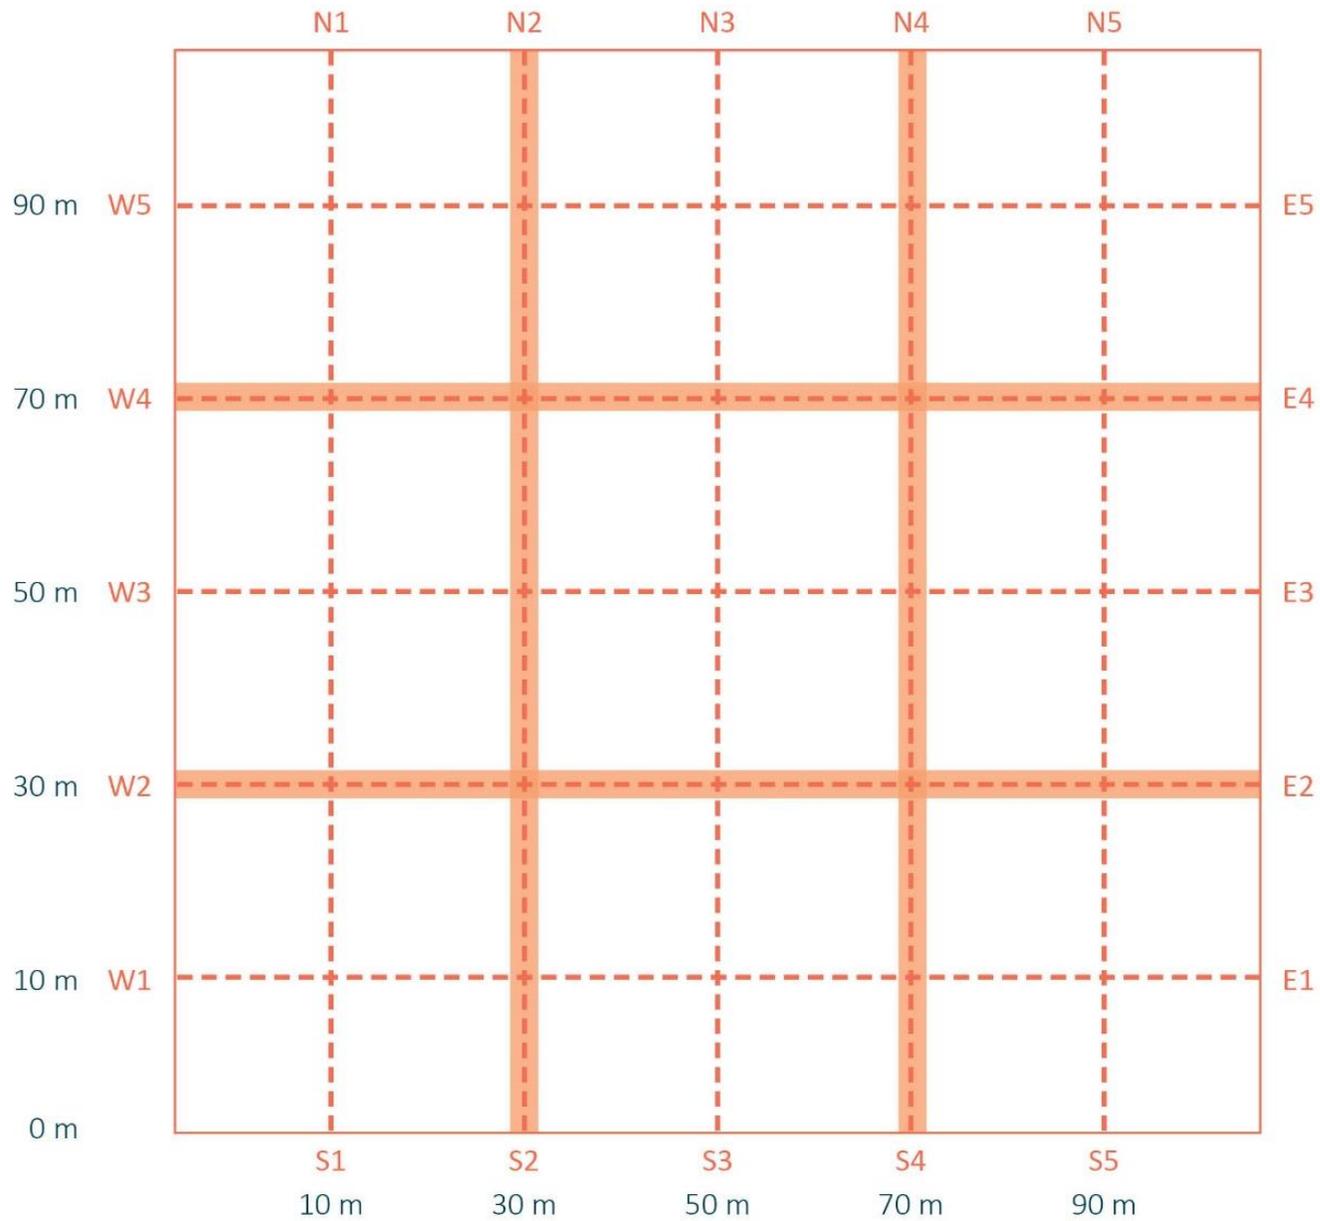

# Cover Module

- + Requires Floristics vouchers
- + Record substrate and vegetation cover
- + Uses the point intercept method
- + **Enhanced protocol**
  - + Records the substrate, vegetation and vegetation height at 1010 points across a plot
  - + Estimates cover and species richness
  - + Data used to classify the vegetation association to NVIS Level 5
- + **Standard protocol**
  - + Has a smaller samples size (404 points)
  - + Standard protocol collects fractional cover
  - + Classifies vegetation as photosynthetic or non photosynthetic

-  Standard point intercept transect
-  Point-intercept transect
-  Core plot

# Fire Severity Module

- + Additional attributes measured during Cover - point intercept surveys
- + Cover survey plus fire severity attributes measured at a total of 404 points along 4 x transects
- + Maximum trunk char height measured at 4 x locations
- + Requires Floristics vouchers

# Basal Area Module

- + Requires Floristics vouchers
- + Use one of two protocols to measure the average area within the plot occupied by trees and provide information on stand density.
  - + **DBH Protocol**
    - + Plot sampling
    - + Measure diameter at breast height (DBH) for all trees within 40 x 40 m or 100 x 100 m area
  - + **Basal Wedge Protocol**
    - + Point sampling, rapid assessment
    - + Using handheld gauge (basal wedge)
    - + Basal area can be estimated in m<sup>2</sup>/ha by multiplying the count of 'in' trees across a 360° sweep with the selected BAF.
- + Data may be used to:
  - + Monitor tree growth
  - + Calculate tree biomass and carbon sequestration (using allometric equations)

in (+1) borderline (+0.5)

out (0)

# Recruitment Module

- + Recruitment is an indicator of ecosystem health and condition
- + Requires Floristics vouchers
- + **Age structure protocol**
  - + Records the growth and life stages of each perennial species to assess level of recruitment and potential to recruit (100 x 100 m)
  - + Seedling, sapling, juvenile counts for woody species to assess age class structure (40 x 40 m)
- + **Survivorship protocol**
  - + Tagging and tracking growth and health of individual plants over time
  - + Monitoring restoration, translocations, post fire recovery

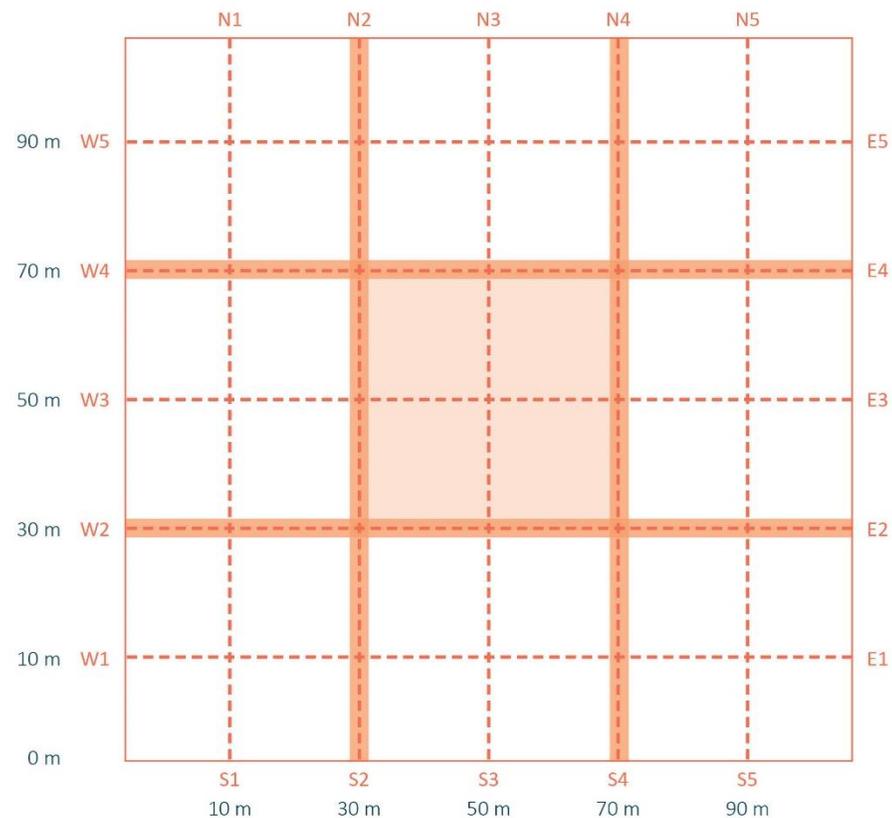

# Vegetation Mapping Module

- + Provides a standardised approach to vegetation classification in line with NVIS information hierarchy
- + For dominant species of each strata record:
  - + Dominant growth form
  - + Average height
  - + Foliage projective cover
- + Additional measures help identify variability within vegetation associations and assist stratification and assessment. These measures include:
  - + Homogeneity measure
  - + Vegetation growth stage
  - + Disturbance
  - + Land use history
  - + Fire history
- + Classifying and mapping vegetation helps simplify complex systems into discreet units and understand the distribution of vegetation communities.
- + Vegetation mapping may be used to inform monitoring plot and management action locations.

# Coarse Woody Debris Module

- + Record the size and decay class of coarse woody debris (CWD) and tree stumps on the ground.
- + Condition measure
- + CWD contributes to a range of ecosystem processes
- + Data provides insight into structure, habitat, fuel load

Decay class 1:	Decay class 2:	Decay class 3:	Decay class 4:	Decay class 5:
<p>Recently fallen. Structurally intact or almost so; bark or small branches still attached; few signs of wood decay; wood mostly retains original colour.</p>	<p>Structurally less intact but still hard when kicked; small branches absent; little or no bark present; early signs of wood decay, bark loss or discolouration.</p>	<p>Clearly decaying but still supports own weight; may be slightly soft when kicked; may be hollow in places; no bark; moss and fungi may be prominent.</p>	<p>Cannot support its own weight; soft to kick (but may still be hard in places; in which case may be extensively hollow); moss, fungi and invading roots likely.</p>	<p>No longer retains original shape; wood very soft or largely disintegrated; sometimes only outline visible beneath moss, invading roots.</p>
				
				

# Condition

+ The condition module surveys the following attributes:

+ Tree condition

- + Growth stage
- + Life stage
- + Height
- + DBH

+ Tree health

- + Canopy cover
- + Crown damage
- + Mistletoe
- + Hollows
- + Insect damage
- + Other damage
- + Leaf litter depth

+ Requires Floristics vouchers

+ When combined with other EMSA modules that assess the structure, function and species composition, condition measures provide insight in the overall health and ecological function of a system

# Habitat Condition Assessments

## Recommended modules:

## Pre-requisites

## Optional modules for collecting condition attributes:

# EMSA Modules – Fauna Monitoring

## Invertebrate Fauna

- Wet pitfall trapping
- Rapid ground trapping
- Malaise trapping
  - Pan trapping
  - Active search

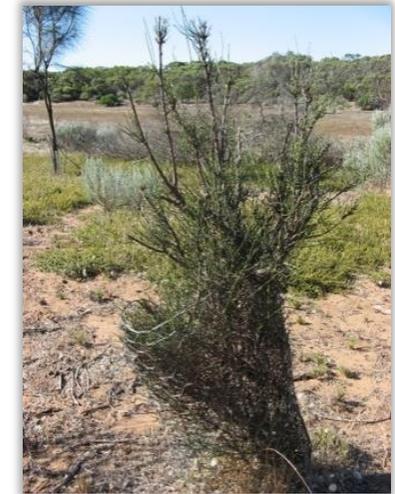

Collect invertebrate samples.

## Herbivory and Physical Damage

- Within-plot belt transect
  - Off-plot transect
  - Active Plot Search

Record signs of herbivory and physical damage to vegetation, land and other infrastructure.

## Vertebrate Fauna

- Bird survey
- Trapping survey set up
- Identify, measure and release
- Trapping survey closure
- Active and passive search
- Acoustic and ultrasonic recordings

Survey techniques to identify the diversity of the vertebrate fauna community.

## Sign-based Fauna Surveys

- Within-plot Belt Transect
- Off-plot Belt Transect
  - Plot Sign Search
  - Vehicle Track
  - Track Station

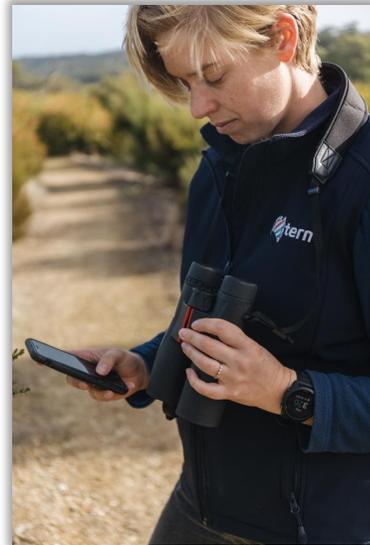

Record signs of fauna presence within the plot or on off-plot transects.

# EMSA Modules – Fauna Monitoring

## Fauna Aerial Surveys

Record the survey details, distance travelled and species counts for surveys undertaken from an aircraft.

## Camera Trapping

- Deployment
- Re-equipping
- Retrieval

Record the placement and details of camera traps.

## Opportune

Record opportune observations of species across a project area.

## Fauna Ground Counts

- Transects
- Vantage point

Record observations of fauna from vantage points or transects.

# EMSA Exemptions – Recording monitoring using other methods

If you are granted an exemption from using the EMSA monitoring methods, you may be asked to enter information into EMSA via the Targeted Survey Module.

## + Targeted Surveys Module

- + Meta data collection module
- + Projects that conduct monitoring that does not fit into the standardised EMSA monitoring framework
- + Monitoring is already contributing to a long-term data set
- + Threatened species monitoring

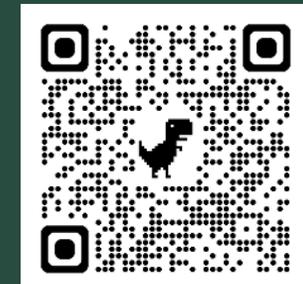

# Preparing your device for field data collection

- + Best practice app management
  - + Prepare for offline collections
  - + Load map tiles if necessary
  - + Syncing data with a stable internet connection
- + Have copies of the Module Manuals to refer to
  - + The app's main function is as electronic datasheets
  - + Has lots of information to guide users through monitoring steps, but much more detail is provided in the protocols

## EMSA Tutorials

*Best practice workflow in Monitor*

# Caching map tiles in Monitor

- + Caching saves map 'tiles' at selected levels of zoom for offline use
- + Monitor doesn't hold cached tiles for all of Australia (and neither does google maps!)
  - + Manually cache tiles for plots expected to have poor or no mobile connection.
  - + Location functions will still work without caching map tiles, only the map will have no topographic reference view.

## EMSA Tutorials

*Caching map tiles in Monitor*

# Syncing

1. Review the **Summary of your collected data**
2. **Queue Collection for Submission**
3. **Sync Queued Collections with Cloud**
4. Wait for the loading bar to complete
5. Wait for the green **'Successfully submitted all queued collections'** message banner to appear

Completed surveys in Monitor are stored on your device's 'local storage' and are listed in the **Summary of Collections Pending Sync** until they are synced with the cloud

Once your queued collections have been **synced with the cloud** the data has been sent from your device to MERIT database

# Trouble shooting sync errors

- + Sync errors occur when
  - + A network collection is lost
  - + The receiving server is down
  - + Your data doesn't match the database fields
- + If a sync error occurs:
  - + Check your network connection
  - + Wait 5 mins
  - + Try syncing again
  - + **Leave the app open** as it attempts to sync
  - + If the error persists, **contact the EMSA Help Desk**

# Setting the *Current Context* in Monitor

1. Open the **Plot Selection and Layout Module** and start the **Plot Layout and Visit protocol**
2. **Select existing**
3. Select the name of the plot you're working in
4. Select **Complete Plot Layout Component**
5. Select **Complete Plot Fauna Layout Component**
6. **Select Existing**
7. Select the name of the visit you are working in
8. **Complete the Plot Visit Component**
9. Review the data
10. Select the **Set Plot Context**

# GNSS receiver

- + EMSA protocols require **sub metre** location precision for laying out plots
- + GNSS - Global Navigation Satellite Systems
  - + GPS - Global Positioning System (US Gov owned and operated)
  - + GLONASS (Russian Gov owned and operated)
  - + Galileo (European union agency for space program owned and operated)
  - + NAVIC (Indian Gov owned and operated)
  - + BeiDou (China Gov owned and operated)
  - + QZSS (Japanese Gov owned, QZS operated)
- + TERN Hire out DGPS (Trimble R1)
  - + Differential GPS
  - + We provide instructions for connect an external location receiver to your hand-held android device (including setting up the mock location)
- + It may take some time to connect and to provide a precise location the first time you use it in a region.
  - + Plan for this –turn it on in the car

# Check list

## Before you go out in the field

- ✓ Ensure Plot Selection has been undertaken for your project
  - ✓ Contractors can't do this step – it must be undertaken by someone with MERIT access before field work is undertaken
- ✓ Prepare your device/s for offline data collection
- ✓ Ensure you have the relevant EMSA module manuals downloaded or printed to refer to
- ✓ Ensure your GNSS receiver and device are compatible and linked
- ✓ Ensure you have all the equipment you require
- ✓ Plan for sample and data storage/management

# Habitat Condition Assessments

- + Condition attributes are collected in the following EMSA Modules:
  - + **Condition** – measures individual tree health and condition
  - + **Recruitment** – an assessment of age class structure of vegetation within the plot
  - + **Course Woody Debris** – contributes to a range of ecosystem processes that that impact the condition of a system including structure, habitat and fuel load.
  - + **Fire Severity** – recommended if the plot has been recently burnt (shows signs of recovery from fire (estimated to be from the last 5-10 years).
  - + **Herbivory and Physical Damage** - record any herbivory or physical damage present in the project area.
  - + **Sign based surveys** – collect indicators of pest fauna presence and/or impact
- + Data collected in the following modules also feed into condition assessments
  - + **Floristics Module** – provides an inventory of species and information on the composition of native and introduced species
  - + **Cover Module** – results of the Cover Module feed into the overall condition assessments and analysis and provide information about native and weed cover.

# Floristics Module

- + Collect voucher specimens for of all the species appearing on a plot
- + Collect specimens that:
  - + Representative of the population at the site,
  - + Include distinguishing ID features (flowers and seeds etc.)
  - + Are fertile (if possible)
  - + Have above and below ground structures (where possible)
- + Collect into a day press on the plot and then transfer into a field press when barcoding and naming.
- + Voucher specimens are pressed and dried.
  - + Photographs may be taken to accompany the pressed specimen (e.g. of bark, habit etc.)
- + On revisits only collect voucher specimens for new species
  - + Photograph species that have already been inventoried
- + Use field names to identify unknown species
  - + Field names carry over to other protocols such as Cover and Recruitment
- + Herbarium or approved botanist will verify the species for voucher specimens

# Floristics Module

## Field name conventions

- + Field names are used when a plant cannot be confidently identified to species in the field.
- + Field names should be descriptive and use clear botanical language where possible.
- + Consider who else may be referring to Floristics vouchers during their surveys and if they will be able to identify the plant correctly from the field name.

### How descriptive are these field names for the plant in the pictures?

- + Wattle 1
- + Yellow flower, tall, prickly
- + A. para
- + Kangaroo thorn
- + Hedge wattle
- + Acacia, spiny, flowers on peduncle
- + Acacia paradoxa

- + Leaf litter depth

\* Required field

# Plot Description

## Landscape observations

- + Plot Description puts the plot and surveys in context within a landscape.
- + Observations within a representative area of the plot:
  - + Slope\*
  - + Aspect\*
  - + Relief\*
  - + Landform element\* (e.g. plain, hillslope, drainage depression)
  - + Outcrop Lithology
  - + Coarse Fragment Lithology
- + Observations of the surrounding landscape ~300 m radius:
  - + Modal slope\* (category: e.g. level, gently inclined etc.)
  - + Landform pattern\* (e.g. alluvial plain)

# Plot Description

## Flora observations

- + Plot Description puts the plot and surveys in context within a landscape.
- + Landscape observations are only recorded on the first visit to a site (in the Plot Description - Enhanced protocol)
  - + Observations within a representative area of the plot
    - + Slope\*
    - + Aspect\*
    - + Relief\*
    - + Landform element\* (e.g. plain, hillslope, drainage depression)
    - + Outcrop & coarse fragment Lithology
  - + Observations of the surrounding landscape ~300 m radius
    - + Modal slope\* (category: e.g. level, gently inclined etc.)
    - + Landform pattern\* (e.g. alluvial plain)

# Vegetation Mapping

Collect vegetation attributes for the three dominant strata (with foliage projective cover  $\geq 5\%$ )

- + Dominant growth form
- + Average height
- + Visual estimate of foliage projective cover

## Traditional 3 strata

### Upper storey

- Species 1 – U1
- Species 2 – U2
- Species 3 – U3

### Mid storey

- Species 1 – M1
- Species 2 – M2
- Species 3 – M3

### Ground storey

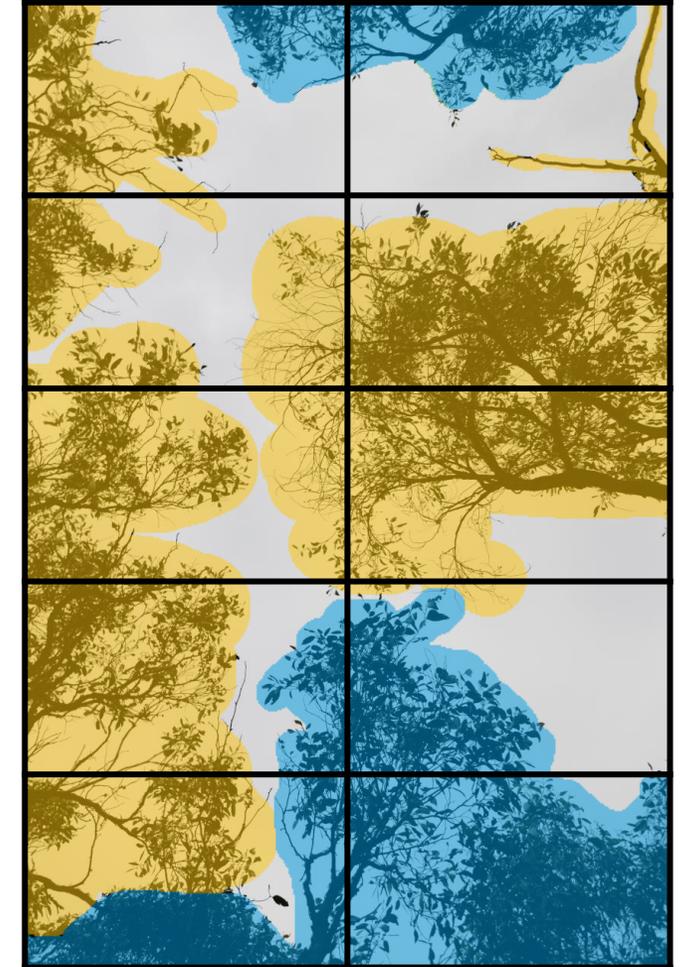

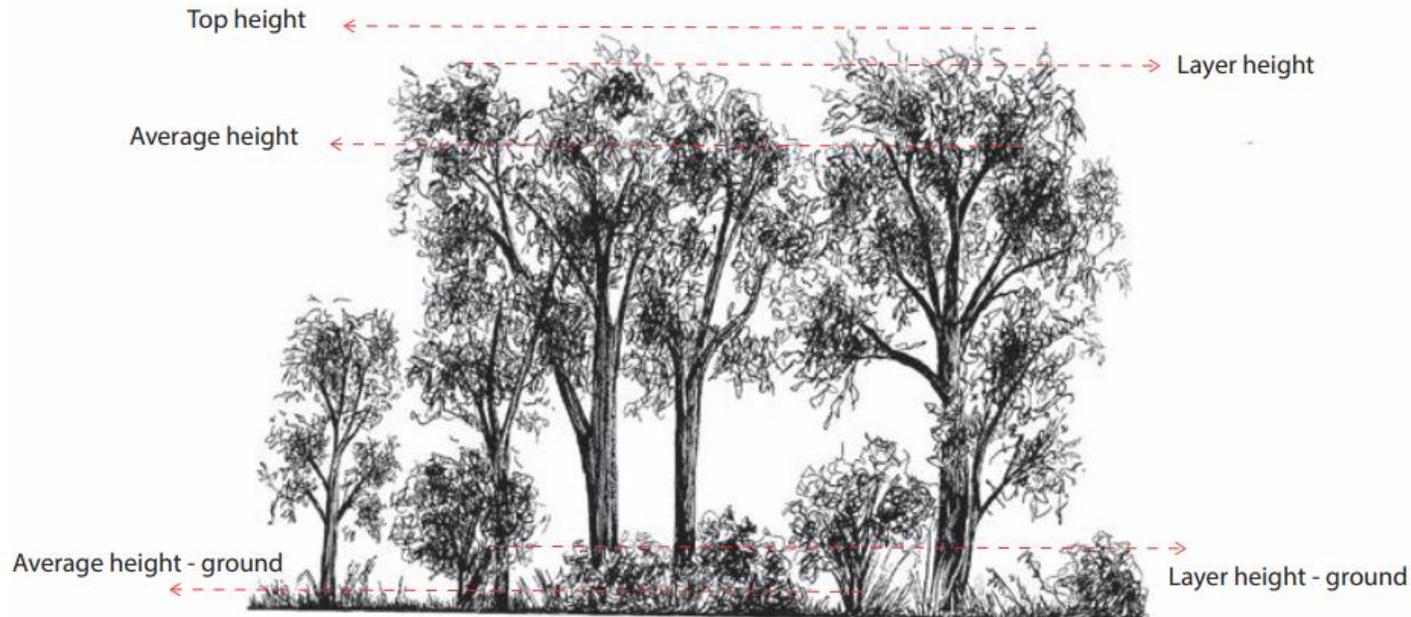

- Species 1 – G1
- Species 2 – G2
- Species 3 – G3

# Vegetation Mapping

Collect vegetation attributes for the three dominant strata (with foliage projective cover  $\geq 5\%$ )

- + Dominant growth form
- + Average height
- + Visual estimate of foliage projective cover

# Ground Counts

## + Survey setup

- + Record the proposed survey locations and give them permanent names
- + These survey set ups will be saved for future surveys.

## + Vantage point/ Transect setup

- + Survey Date/Time
- + Observer Names
- + Equipment
- + Target species
- + Weather Conditions and 'sightability'

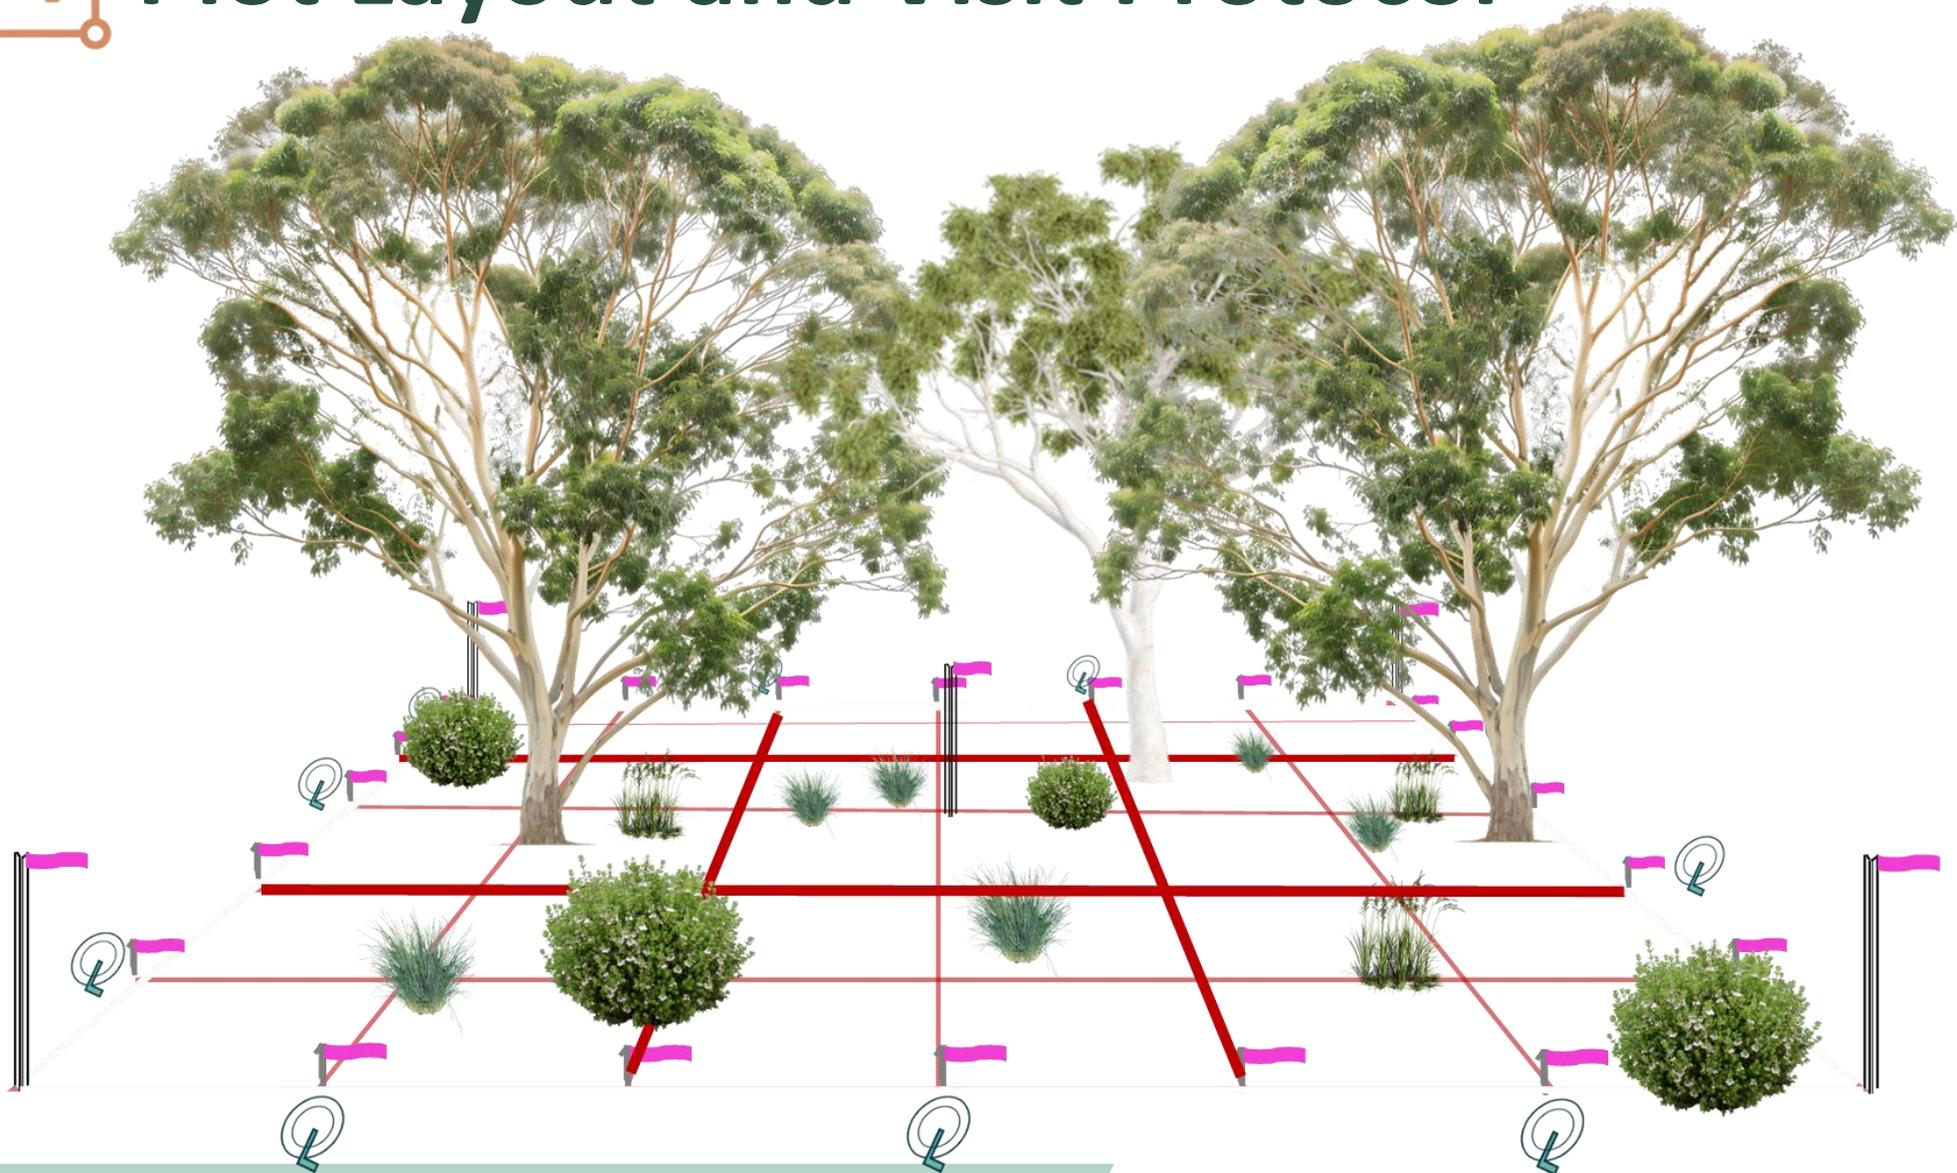

## + Conduct survey

- + Species observed
- + Other observation details (#, age, sex etc.)
- + Distance and direction (if distance sampling)
